Letter no 18992 dt 9. 6. 26 from the Chief Engr.

Forwarding a copy of letter no 5445 dt 19th April 1926 from the Executive Engr., Water Supply Division, requesting on the grounds of the limited funds which may be available this year to restrict the work to the sinking of one tube well in the Muhalla for supplying water to the town and that the proposal for the pumping water from a tank of the Mohalla Nagarwalan should, may therefore be abandoned.

Letter no 6347 dt 29. 6. 26 from the Supdg. E. E.

Forwarding for sanction a revised estimate amounting to Rs 2994/- for deepening and testing the yield of the tube well at Sadhaura.

2 The Executive Engr., Water Supply Division explains that two estimates amounting to Rs 1900/- and Rs 1000/- respectively were framed for "sinking the tube well" and "deepening to a further depth of 15 feet" respectively and should be treated as two independent units of sanction and outlay (costs) separately, but these have been transferred combined into one and sanction solicited and that too as per estimates from the Supdg. Engr. Tools and Plant charges amounting to Rs 331 have now been added in the revised estimate.

GENL. & REVENUE BR. No. 10 JUN 1926 G D SECTION

B Nagappa, Esq , Bar-at-law ,
Secretary to Government, Local and Legislative
Departments, Bangalore

SIR,

Adverting to this office No B 10601 dated the 18th March 1926, re deepening the trial well at Doddaballapur, I have the honor to forward herewith a copy of letter No 514 dated the 19th April 1926, from the Executive Engineer, Water Supply Construction Division, reporting on the results of the tests

2 I agree with the Executive Engineer that the well is not suitable for supplying water to the town

3 The project for pumping water from a number of wells behind Nagarkere tank, may therefore be abandoned

I have the honour to be

S i r,

Your most obedient servant,

8 6 26

Chief Engineer of Mysore

HRR 2/7th

42

Letter No 514 dated the 14th April 1926, from the Executive Engineer, Special Water Supply Construction Division, to the Chief Engineer of Mysore, Bangalore

In continuation of this office No 459 dated 9-3-1926 submitting a report on the progress secured in further deepening the trial well at Dodballapur, I have the honour to state that further deepening was taken up in accordance with Government Order No I 809-S-8/M1 167-21-4 dated 17-5-1924 and the well was deependd by 9½' during 24, since rains commenced and the percolation was too much to be removed by baling, further work had to be stopped as reported in this office No 2766 dated 20-6-1924.

During the summer of 1925, the tank had a good supply of water in it, and all the fields surrounding the trial well were flooded with water for irrigation purposes, the well was itself overflowing, the work was postponed and meanwhile enquiries were being made for a suitable pumping set No such set was available, and the pitkota that was temporarily put up could not bale out all the water quick enough to do further work, hence as already reported in this office No 656 dated 5-6-1925 no further deepening could be made during the summer of 1925

Astor Pumping set was however, secured from the Superintendent, Central Industrial Workshop, in the month of November 1925 with its help the water was pumped out every day and further deepening was made during the present season

The pump had a capacity of 10000 to 15000 gallons an hour and the whole well could be emptied in less than 20 to 25 minutes

The deepening by a further depth of 15' was completed by the end of February last and since the pump was too powerful to gauge the slow yield of the well, only recouperation tests were conducted on the lines of those previously conducted in 1922-23 starting from 7-3-1926

From the enclosed statement which gives the results of the recent tests, it is seen that the average recouperation is 6 gallons a minute or 360 gallons an hour It is naturally highest at the

bottom of the well and is gradually reduced as we come up. From 9 gallons a minute at the bottom of the well 35' deep#, it is gradually reduced to 3 gallons a minute at a level 19' below ground

As already reported in this office No 419 dated 21-8-23, the recouperation then was 356 gallons an hour or 6 gallons a minute at a depth of 20' below ground and this was reduced to about 1/3 gallon per hour at the top There is no spring at the bottom of the well, but all the water is coming in through the sides at a number of points just above the bed It is only the percolation water from the surrounding grounds

During the present test, there was no water in the tank and all the surrounding fields were completely dry so that the present is a crutial test on the yield of the well.

It is thus seen that the yield from the well is not good enough to meet the requirements of the town, even if a number of wells are dug up and I would therefore recommend that the project of pumping water from a number of wells behind Nagarkere Tank be abandoned

No. 92

OFFICE OF THE ~~Mechanical~~ Industrial ENGINEER

Bangalore, 17th August 1926

15

5693

From The ~~Mechanical~~ Industrial Engineer,

BANGALORE

To

The Director of Industries & Commerce,

Bangalore.

Sir,

Re. Water Supply at Doddaballapur.

I have the honour to report as under -

I have examined a number of wells at Doddaballapur. I find that the water is obtained at a depth of 70 to 80 ft from the surface, all the wells have penetrated rocky strata

There seems to be a definite variation between wells on the one side of the Town and the other side In one case, after penetrating through slaty rock, they get flint and quartz, and on the other black rock seems to extend deeper

Except in the case of wells which are at a level below the Tank-bed the water in the wells is slightly brackish

In almost all the wells there is a shallow depth of water, but the wells near the tank contain more water which is due to percolation of the surrounding area which give out when continuously pumped

I am of opinion that fresh water can be obtained by going deeper in the existing wells, the brackishness may be eliminated by lining tubes, which will keep off water from upper layers

In any case a bore-hole of about 100 to 150 ft in a suitable locality will furnish valuable data as to the yield and quality of water at such depths It may cost roughly about Rs.1,200/- to put the bore-hole of 5½" diameter to a depth of, say, 120 to 150 ft In case there is a promise of success, we may go deeper at extra cost

I should like to mention that the Vice-President, Mr T Siddappa, gave me a lot of help and showed me round the places, but I regret to state that the Amildar who is also the President exhibited very little

in

little interest in the affair and even when I called at his place an spoke to him about my business, he was indifferent

I request you to write to the Municipality to make available the sum of Rs 1,200/- to start with the work They have spent considerable sums in sinking wells for the Town water supply and they hav a large estimate for the surface water supply and filteration for the Town If a bore-hole of 5½" or 6" carried deep enough assuming we strike a spring we may be able to give the Town 30,000 - 40,000 gallons a day which is what they require at the rate of 5 gallons per for a population of 8,000

I have the honour to be,

Sir

Your most obedient servant,

B G Thamdaha

Industrial Engineer

SDN-4)
17/8

Name of well.	Depth in ft	Water	Remarks
1. Municipal Well below tank bed	35'	25'	Surface percolation, gives out after 17 hrs pumping with 3" pump (fresh water)
2 Kalasipalya Well	40'	1'	Fresh water - This is at a higher level but th level will be as in (1) Percola tion water
3. Chigora Temple well	55'	No water	6' diameter at bottom - Flint & quartz blasting going on This is 200 yds from (2)
4 Chikkanna well	77'	No water	Blasting going on Samples as in (3) & ½ a furlong from (3)
5 Chikkanna Well	78'	10'	Percolation, close to (4)
6. Lakshmiah	65'	No water	Boring worked All black roc - water may be at a greate depth

N.B -

The local rate is for 1 yd of 4' diam Rs 60/- or it costs per foo Rs 20/- for depths up to say Rs 80/- It will be more after th and not easy to work A bore-well car go deeper and at say Rs 10 to Rs 12/- per foot of depth

Local and Legislative Departments,
Bangalore

Ans 4-26-5

Sir,

With reference to your letter No L 2202/M1 4-26-4 dated the 21st September 1926 calling for the resolution of the Dodballapur Municipal Council in the matter of meeting the cost amounting to Rs 1200/- for getting a tube well sunk by the Industrial Engineer and also for the explanation of the Amildar, Dodballapur Taluk, for the alleged indifference shown by him in this important matter when the Industrial Engineer visited I have the honour to submit herewith an extract from the resolution of the Dodballapur Municipal Council agreeing to meet half of the cost of the well Viz Rs 600/- the other half being met from State funds

I beg also to submit herewith copy of report NO 30 dated the 15th November 1926 from the Amildar Dodballapur explaining the circumstances that might have led the Industrial Engineer to make a report against him though he discharged his duties properly The explanation of the Amildar may be accepted

I have the honor to be
Sir

Your most obedient servant

T Govinda Rao

CR Deputy Commissioner
Bangalore District

dated the 15th November 1926
Report No 30/from the President, Dodballapur Municipal Council to the Deputy Commissioner, Bangalore District

---

With reference to your Memo No C2-2704/25 dated the 1st November 1926 forwarding letter No L 2202/M1 4-26-4 dated the 21st September 1926 from the Secretary to the Government Local and Legislative Departments re the scheme for the supply of water to Dodballapur towns by means of a tube well at a cost of Rs 1200/- I beg to state that the matter was placed before the meetingof the Municipal Council held on the 13th instant and the copy of the resolution arrived at is herewith submitted for favour of kind perusal

It will be seen from this that on account of the paucity of funds at the disposal of the Municipality they plead their inability to meet the entire cost required but that they are agreeable to pay half of the cost Viz Rs-600/- if the Government is pleased to meet the other half as promised by them at the outset when the water supply scheme was started that the initial cost in this connection would be borne by Government entirely They therefore request that the Government may kindly be moved to sanction a grant in-aid of Rs600/- towards the cost of tube well

As regards the indifferance said to have been shown by me as remarked by the Engineer I beg to submit that on receipt of his letter on the 14th August 1926 announcing his arrival on the next day I instructed the Vice-President of the Municipality to meet him at the Railway Station and send information to me of his arrival as I had to meet the Inspector General of Education who was staying here and also to preside over the General meeting of the Co-operative Society on that day In accordance with my instructions the Vice-President met him at the Railway station and accompanied him into the town On the way the Engineer inspected some of the wells with the Vice President and came to me The Engineer told me the object of his visit and the inspections of the several wells In the course of our talk I told him about the several projects that were thought of but which were abandoned as they were found to be not feasable He then asked me to send the water supply file to the Travellers Bungalow which I did When I asked him whether he required any further information or help he said he wanted

none and went to the Travellers Bungalow In the after-noon I learnt that he had left the place with the Inspector General of Education When I have given him all possible help and information, I am at a loss to know the reasons for his remarks against me Perhaps he expected that ~~he~~ I would wait for him at the Railway Station which I would have gladly done but for the other engagements which prevented me from doing so
